

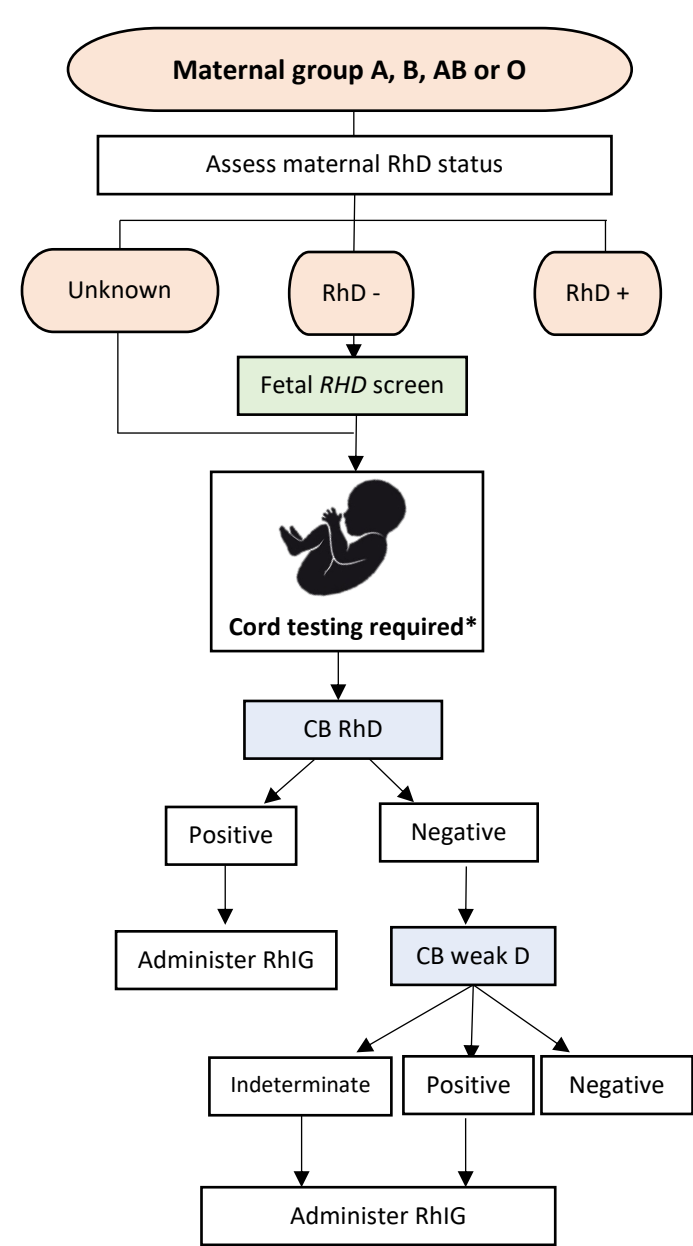

Figure 2A. Management of neonatal cord specimen from an RhD negative pregnant individual

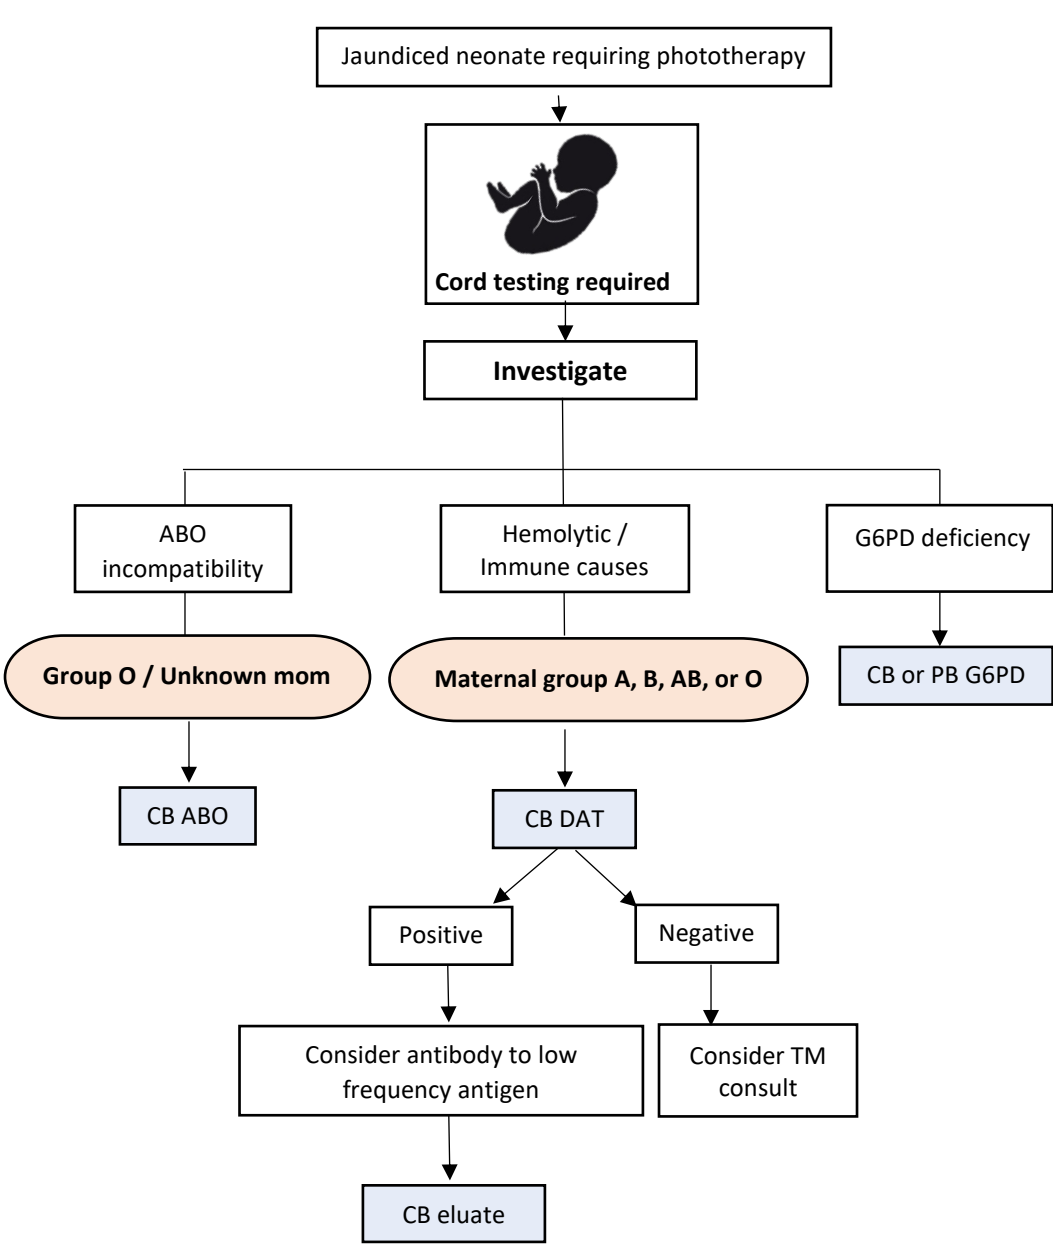

Figure 2B. Management of neonatal cord specimen of a jaundiced neonate

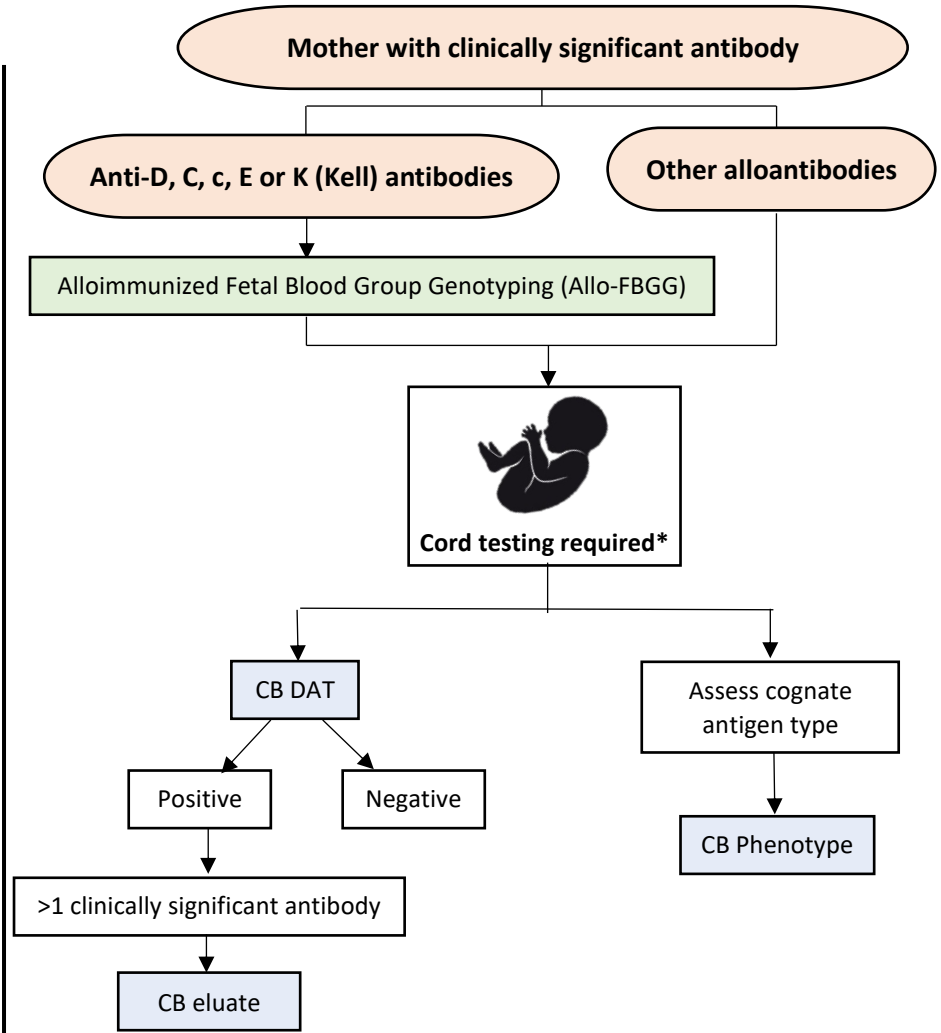

Figure 2C. Management of neonatal cord specimen from a pregnant individual with clinically significant antibodies

Legend	
	Maternal Status
	Fetal Blood Group Genotyping Tests
	Cord Blood (CB) Tests

* Fetal *RHD* and/or cognate antigen status may be determined through Fetal *RHD* screening and/or Alloimmunized Fetal Blood Group Genotyping (Allo-FBGG) testing. Cord blood testing for RhD and cognate antigen is still required for quality assurance.
